

# FLIP ART

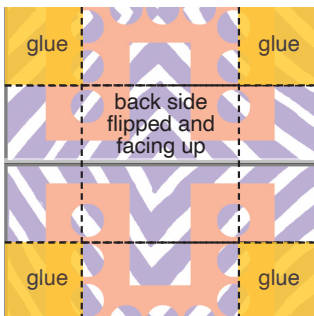

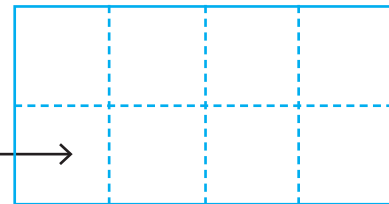

Impress your friends with a rotating four panel art show! The possibilities are endless.

## What you need

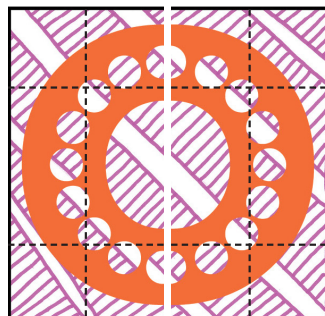

- Four 3-1/2"x3-1/2" panels with your own unique drawings. Have fun – anything goes!  
You can make the squares a different size but the smaller they get the more difficult it is to fold.
- Do not use thick paper because it will not fold well.
- Scissors
- Glue

- 1 Cut the four panels in half as shown above with scissors (two horizontal cuts and two vertical cuts).

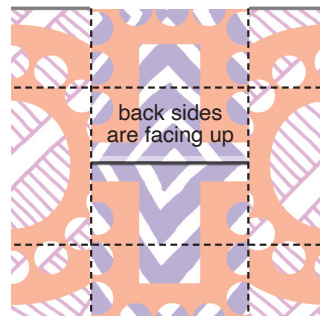

Fold every panel to create the fold lines shown to the right. Having carefully placed fold lines is important for the rotation of the panels.

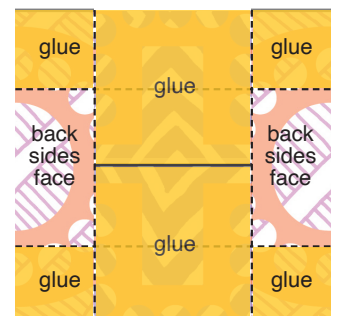

- 2 Apply glue to the areas shown. Don't apply too much or the glue will expand beyond the intended area.

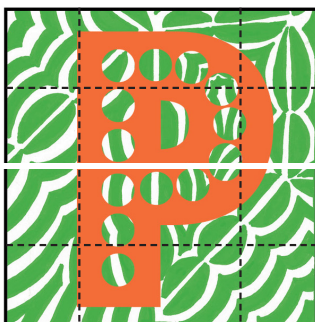

- 3 Place the second panel on top of the first panel. Press down on the corners to secure the glue.

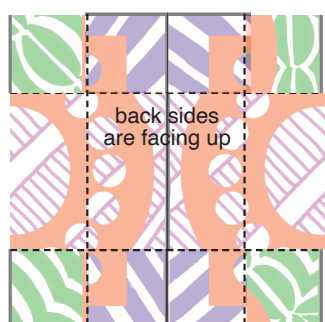

- 4 Fold the side panels backwards.

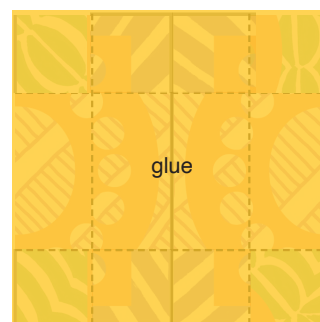

- 5 Apply glue to the areas shown.

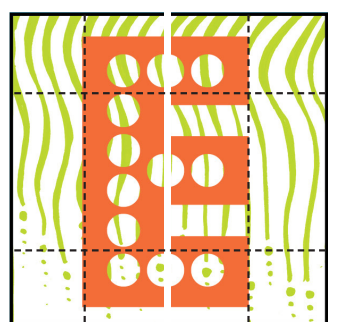

- 6 Place the third panel on top. Press down on the corners to secure the glue.

- 7 Flip the top and bottom panels to the back.

- 8 Apply glue to the entire area that is facing up.

- 9 Place the third panel on top. Press down on the corners to secure the glue.

Rotate through the four panels. The more times you do so, the smoother the flow will be.

Take this to the next level by creating an Infinite rotating tetrahedron: <https://youtu.be/db8PniE4PmQ>
